

FUTURE READY BY DESIGN

Provide for future possibilities. Don't lose later.

MONTESTRUCTURA

Design decisions made today define the level of **automation and intelligence possible tomorrow.**

AI SYSTEM REQUIREMENTS:

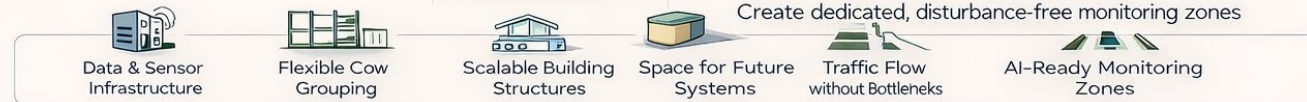

- ✓ Controlled observation zones
- ✓ Minimal disturbance and noise
- ✓ Stable and predictable cow behavior
- ✓ Consistent lighting and sensor conditions

The performance of AI systems depends less on software — and more on the stability of the environment they operate in.

FUTURE-READY DESIGN MEANS:

- ✓ Reserve space for future systems
- ✓ Avoid fixed bottlenecks
- ✓ Enable modular expansion
- ✓ Plan flexible cow flow and grouping
- ✓ Integrate data and sensor infrastructure from the start

Create dedicated, disturbance-free monitoring zones

A farm not designed for future systems will be limited by its own layout.
